and Trademarks  
Washington, DC 20231

## NEW APPLICATION TRANSMITTAL

Transmitted herewith for filing is the patent application of

Inventor(s): Ruvolo et al.

**WARNING** Patent must be applied for in the name(s) of all of the actual inventor(s). 37 CFR 1.41(a) and 1.53(b).

For (title): System and Method for Matching Entities Utilizing an Electronic Calendar System

## 1. Type of Application

This new application is for a(n) (check one applicable item below):

- ☒ Utility  
☐ Design  
☐ Plant

NOTE: If one of the following 3 items apply then complete and attach ADDED PAGES FOR NEW APPLICATION TRANSMITTAL WHERE BENEFIT OF A PRIOR U.S. APPLICATION CLAIMED and a NOTIFICATION IN PARENT APPLICATION OF THE FILING OF THIS CONTINUATION APPLICATION.

- ☐ Divisional  
☐ Continuation  
☐ Continuation-in-part (CIP)

## 2. Benefit of Prior U.S. Application(s) (35 USC 120)

NOTE: If the new application being transmitted is a divisional, continuation or a continuation-in-part of a parent case, or where the parent case is an International Application which designated the U.S., then check the following item and complete and attach ADDED PAGES FOR NEW APPLICATION TRANSMITTAL WHERE BENEFIT OF PRIOR U.S. APPLICATION(S) CLAIMED.

- ☐ The new application being transmitted claims the benefit of prior U.S. application(s) and enclosed are ADDED PAGES FOR NEW APPLICATION TRANSMITTAL WHERE BENEFIT OF PRIOR U.S. APPLICATION(S) CLAIMED.

## 3. Papers Enclosed Which Are Required For Filing Date Under 37 CFR 1.53(b) (Regular) or 37 CFR 1.153 (Design) Application

- 18 Pages of Specification and Abstract  
7 Pages of Claims

10 Sheets of drawing

       Formal

X Informal

NOTE: "Identifying indicia such as the serial number, group and unit, title of the invention, attorney's docket number, inventor's name, number of sheets, etc., not to exceed 2 3/4 inches (7.0cm in width may be placed in a centered location between the side edges within three fourths inch (19 mm) of the top edge. Either this marking technique on the front of the drawing or the placement, although not preferred, of this information and the title of the invention on the back of the drawings is acceptable." Proposed 37 CFR 1.84(1). Notice of March 9, 1988 (1090 O.G. 57-62).

#### 4. Additional Papers Enclosed

- Preliminary Amendment
- Information Disclosure Statement (37 CFR 1.98)
- Form PTO-1449
- Citations
- Declaration of Biological Deposit
- Submission of "Sequence Listing," computer readable copy and/or amendment pertaining thereto for biotechnology invention containing nucleotide and/or amino acid sequence.
- Authorization of Attorney(s) to Accept and Follow Instructions from Representative
- Special Comments
- Other

#### 5. Declaration or Oath

- X Enclosed  
executed by (check all applicable boxes)
- X inventor(s).
- legal representative of inventor(s). 37 CFR 1.42 or 1.43
- joint inventor or person showing a proprietary interest on behalf of inventor who refused to sign or cannot be reached.
- this is the petition required by 37 CFR 1.47 and the statement required by 37 CFR 1.47 is also attached. See Item 13 below for fee.

☐ Not Enclosed

☐ Application is made by a person authorized under 37 CFR 1.41(c) on behalf of all the above named inventor(s). (The declaration or oath, along with the surcharge required by 37 CFR 1.16(e) can be filed subsequently).

NOTE: It is important that all the correct inventor(s) are named for filing under 37 CFR 1.41(c) and 1.53(b)

☐ Showing that the filing is authorized. (Not required unless called into question. 37 CFR 1.41(d).

## 6. Inventorship Statement

**WARNING:** If the named inventors are each not the inventors of all the claims an explanation, including the ownership of the various claims at the time the last claimed invention was made, should be submitted.

The Inventorship for all the claims in this application are:

☒ the same

or

☐ are not the same. An explanation, including the ownership of the various claims at the time the last claimed invention was made.

☐ is submitted

☐ will be submitted

## 7. Language

☒ English

☐ non-English

☐ The attached translation is a verified translation. 37 CFR 1.52(d).

## 8. Assignment

☒ An assignment of the invention to INTERNATIONAL BUSINESS MACHINES CORPORATION

☒ is attached. A separate

☒ "COVER SHEET FOR ASSIGNMENT (DOCUMENT) ACCOMPANYING NEW PATENT APPLICATION" or

☐ FORM PTO 1595 is also attached.

☐ will follow.

NOTE "If an assignment is submitted with a new application, send two separate letters-one for the application and one for the assignment " Notice of May 4, 1990 (1114 O.G. 77-78).

**9. Certified Copy (35 USC 119)**

Certified copy(ies) of application(s):

## 12. Request for International-Type Search (complete, if applicable)

— Please prepare an international-type search report for this application at the time when national examination on the merits takes place.

**13. Fee Payment Being Made At This Time**

Not Enclosed

— No filing fee is to be paid at this time. (This and the surcharge required by 37 CFR 1.16(e) can be paid subsequently.)

X      Enclosed

<u>X</u>	basic filing fee	\$ 960.00
----------	------------------	-----------

<u>X</u>	recording assignment (\$40.00; 37 CFR 1.21(h))	\$ <u>40.00</u>
----------	---	-----------------

\_\_\_\_\_ petition fee for filing by other than all the  
inventors or person on behalf of the inventor  
where inventor refused to sign or cannot be  
reached. (\$130.00; 37 CFR 1.47 and 1.17(h)) \$ \_\_\_\_\_

\_\_\_\_\_ for processing an application with a  
specification in a non-English language.  
(\$130.00; 37 CFR 1.52(d) and 1.17(k)) \$ \_\_\_\_\_

— processing and retention fee  
(\$130.00; 37 CFR 1.53(d) and 1.21(l)) \$ \_\_\_\_\_

— fee for international-type search report (\$40.00; 37 CFR 1.21(e)) \$\_\_\_\_\_

**Total fees enclosed** \$ 1,000.00

**14. Method of Payment of Fees**

- ☒ Check in the amount of \$ 1,000.00.
- ☐ Charge Account No. 12-0010 in the amount of \$ \_\_\_\_\_. A duplicate of this transmittal is attached.

NOTE Fees should be itemized in such a manner that it is clear for which purpose the fees are paid.

**15. Authorization to Charge Additional Fees**

**WARNING:** If no fees are to be paid on filing, the following items should not be completed

**WARNING:** Accurately count claims, especially multiple dependent claims, to avoid unexpected high charges, if extra claim charges are authorized

- ☒ The Commissioner is hereby authorized to charge the following additional fees by this paper and during the entire pendency of this application to Account No. 12-0010 :
- ☐ 37 CFR 1.16(a), (f) or (g) (filing fees)
- ☐ 37 CFR 1.16(b), (c) or (d) (presentation of extra claims)
- ☒ **Any deficiencies in the fees provided.**

NOTE: Because additional fees for excess or multiple dependent claims not paid on filing or on later presentation must only be paid or these claims cancelled by amendment prior to the expiration of the time period set for response by the PTO in any notice of fee deficiency, it might be best not to authorize the PTO to charge additional fees, except possibly when dealing with amendments after final action.

- ☐ 37 CFR 1.16(e) (surcharge for filing the basic filing fee and/or declaration on a date later than the filing date of the application.)
- ☐ 37 CFR 1.17 (application processing fees)
- ☐ 37 CFR 1.18 (issue fee at or before mailing of Notice of Allowance, pursuant to 37 CFR 1.311(b)).

**16. Instruction As To Overpayment**

- ☒ credit Account No. 12-0010
- ☐ refund

**TITLE:**

System and Method for Matching Entities Utilizing an Electronic Calendaring System

004240 "004240"

## BACKGROUND OF THE INVENTION

### Field of Invention

The present invention relates generally to the field of electronic calendar systems. More specifically, the present invention is related to an integrated matching service and electronic calendar system.

The following definitions may assist in the understanding of terminology used throughout the specification:

***calendar component*** - collections of properties which define a particular calendar semantic.

***event*** - activity or occasion, such as a meeting, an anniversary, a tennis match, etc., in which an entity participates directly, indirectly, or peripherally and is the item or criteria to be matched.

***calendar event*** - a calendar event of the present invention is synonymous with a calendar component, i.e. it includes a to-do, journal entry, etc and may represent an event in the electronic calendaring system.

***requirements*** - a possible attachment to a calendar event which represents the requirements that any entity or separate calendar event must meet in order to be a successful match.

***attributes*** - a possible attachment to a calendar event which represents the profile/preferences of the entity which corresponds to the calendar event.

***attendees*** - property of a calendar event which contains the identity of the entity or entities which have matched the calendar event.

### Discussion of Prior Art

Electronic calendar systems are a widely used resource in today's society. Electronic calendar systems contain information about events, such as what the event is, when the event will occur, and where it will occur. Attributes about the owner of a calendar, where the owner may be person, a community organization, or business, are contained in the calendaring systems. Attributes describe the owner and the owner's preferences. Use of calendar systems help an owner manage their time, provide reminders to the owner, and allow an owner to summarize events that occurred on a specified date.

Some calendaring systems additionally provide for a scheduling system. In one example of scheduling, an entity defines a meeting and invites attendees. Traditional scheduling systems then locate free slots for the participants and schedules the meeting. In another example, a service, such as a maid service, uses the calendaring system to schedule their cleaning staff with the houses that need to be cleaned. As can be seen by both of these examples, the scheduling system coordinates the activities between known participants. An originator of the meeting invites specific attendees. There is a prior knowledge of the staff of the maid service and the houses which need to be cleaned.

In addition, there are traditional services, such as dating services, bulletin board services, job placement services, classified ads, etc., that attempt to pair parties with similar interest together. All of these services address pairing parties together, where the parties define some criteria for a successful match. These services may involve just two parties, or involve a facilitator, where the facilitator can play a passive or active role. Varying degrees of automation, e.g., keyword searching

of a resume, matching these keywords to job positions, etc., may be implemented in these services. For the different services, the criteria defined is quite different. For instance, the criteria for a dating service is quite different from the criteria required for job placement services. Due to this fact, when the services are substantially fully automated, the criteria stored in the databases is stored in a format that is efficient with respect to the specific service and limited thereto. For this reason, the particular services only practice one category of pairing (e.g. either job placement or dating), or if a certain service happens to provide more than one category, the categories are separate with separate databases. In addition, the different automated service providers typically utilize proprietary technology to provide the automation, therefore, there is not a capability for interconnection of the service providers, i.e., a provider of a dating service cannot be interconnected to a provider job placement services.

While some of the services attempt to pair parties having similar interest, they typically don't provide for pairing parties having similar interest for specific events. Many times an individual may desire to find someone who has a similar interest and who would be able to engage in that interest at a particular time. For instance, one individual may be an intermediate tennis player who desires to play on a specific day and time. However, that individual has no knowledge others who play tennis and are available at that time. Therefore, the individual would like to seek out someone unknown to them who also plays tennis at an intermediate level and can play at the specified time and date. Traditional pairing services would not be of help to the individual, as they typically could only pair the individual with another individual having an interest in tennis, but cannot guarantee their time schedules would be compatible. Similarly, for two parties wishing to engage in some form

of commerce, in such cases, pairing of customer and service provider, or buyer and seller, is often a random process only slightly facilitated by advertising.

The present invention eliminates the foregoing disadvantages by integrating both the time  
5 scheduling capabilities of a calendar system and the efficient matching functions of pairing services  
in one homogenous application that is powerful for many users, organizations and types of services.  
These and other objects are achieved by the detailed description, drawings and claims.

004240 "004240"

## SUMMARY OF THE INVENTION

The present invention provides for an integrated matching service and calendaring system. In addition to the typical items represented by a calendar event, e.g. anniversary, business meeting, to do list, etc., the present invention utilizes a calendar event to represent an activity, e.g., job opening, tennis match, bicycle race, etc., the requirements to match the activity, the entity attributes, and any match results.

An entity defines criteria and information for a matching activity. The information and criteria concerning the activity is represented as a calendar event in a electronic calendaring system. Calendar events representing matching activities and criteria are communicated to a matching server via a calendar access protocol. The matching server then locates suitable matches, if any, and notifies the entities involved of the match.

## BRIEF DESCRIPTION OF THE DRAWINGS

Figure 1a illustrates the system architecture of an integrated calendar and matching system.

Figure 1b illustrates information associated with an event.

Figure 2 illustrates the process of registering a Calendar Event.

Figure 3 illustrates the process of modifying a Calendar Event.

Figure 4 illustrates the process of deleting a Calendar Event.

Figure 5 illustrates the process of searching for matches.

Figure 6a-7b illustrate screenshots for entering event information

## DESCRIPTION OF THE PREFERRED EMBODIMENTS

While this invention is illustrated and described in a preferred embodiment, the device may be produced in many different configurations, forms and materials. There is depicted in the drawings, and will herein be described in detail, a preferred embodiment of the invention, with the understanding that the present disclosure is to be considered as a exemplification of the principles of the invention and the associated functional specifications of the materials for its construction and is not intended to limit the invention to the embodiment illustrated. Those skilled in the art will envision many other possible variations within the scope of the present invention.

The Internet Calendaring and Scheduling Core Object Specification (iCalendar) provides a definition of a common format for openly exchanging calendaring and scheduling information across the Internet. The iCalendar specification defines the format of calendar objects, e.g. components, properties. The components are collections of properties which specify an event, a to-do, a journal entry, free/busy time information, time zone information, or an alarm entered into a calendar.

While, the iCalendar specification contains a separate event component, the "calendar event" of the current invention is broadly defined as synonymous with a calendar component, i.e., a calendar event encompasses not only an event, but also includes a to-do, a journal entry, etc. The calendar event of the present invention is utilized as a bridge between electronic calendaring systems and matching services. In addition, event and activity as used herein are synonymous and are the actual items and/or criteria to be matched, e.g. bicycle race, tennis match, job opening, job position, etc. Through the use of the calendar event to represent matching data, i.e. activities, requirements

to match the activities, attributes of the entity creating the event, and the results of the match, the present invention provides for a generic matching solution, one in which any matching service (existing or new) is capable of being incorporated into. This presents an efficient manner of providing different categories of matching, and allows for disparate systems utilizing the present invention to be interconnected if so desired.

It should be noted, the iCalendar specification was first presented as RFC 2445 (Request For Comment 2445), and as is typical with RFCs continues to be a work in progress and may change over time. However, it is within the spirit of the present invention to utilize the original iCalendar specification, any subsequent modifications thereof, or any other present or future calendaring format protocols. Additionally, the original iCalendar specification can be located at any RFC archive, such as <http://www.faqs.org/rfcs/rfc-titles.html>.

In addition to providing a generic matching service, by integrating a calendar system with a matching service, the capabilities of a calendaring system allow not only matching of similar interest or needs, but provides time-based matching of activities. This not only allows an entity to locate other entities who would be interested in a particular activity, such as a tennis match, but also allows an entity to locate other entities who can participate in the activity at particular times. It can also allow the scheduling of commerce-based activities such as arranging an appointment for a hair cut. This process could also include variable pricing based upon different available time periods. Another advantage of the present invention is correlated to the fact that creating a calendar event is more natural and does not carry the same stigmas associated with it (as opposed to filling out a

dating service application, for example). Therefore, entries into the system are more readily made, facilitating the critical mass needed to perform effective matching.

Figure 1a illustrates the integrated calendaring and matching service architecture of the present invention. Major components of the present invention include “calendar store” 120, “calendar application” 132, “calendar access protocol” 134, and “match server” 100.

Calendar store 120 retains the various properties and calendar components of a single or multiple calendars. In the preferred embodiment of the present invention, the Internet Calendaring and Scheduling Core Object Specification (iCalendar) is utilized to define the format of the calendar objects. As previously described, a calendar event 124, which may be an event, to-do, reminder, etc., is used to represent the matching activity and/or criteria to be matched. In the iCalendar specification, components are capable of having attachments. In the present invention, attachments to the calendar event 124 are used to represent additional information related to the calendar event 124, i.e. requirements 126, attributes 128. Requirements 126 represent the requirements that any entity must meet in order to be a successful match. Attributes 128 represent the profiles/preferences associated with the entity creating the calendar event 124. Additionally associated with a calendar event 124, are the attendees 122. Attendees 122 represent the entities that have matched a particular event.

Calendar application 132 is the electronic calendar system which maintains the calendar store 120. Utilizing calendar application 132, an entity is capable of creating, modifying, or deleting a

calendar event 124. Additionally, in conjunction with calendar access protocol 134, calendar application provides for accessing calendar store 120 by match server 100. Calendar access protocol 134 is any suitable protocol for accessing calendar entries.

5 Match server 100, provides the matching function of the present invention. Match server 100 comprises “request handler” 108, “response handler” 110, “event handlers” 106, “timer module” 104, “match engine” 112, “event repository” 102, and “match repository” 114.

Request handler 110 processes all requests through calendar access protocol 134. Request handler 108 routes requests for calendar event functions to event handlers 106. Event handlers 106 comprise “event registration”, “event modification” and “event deletion.” Event registration, as further illustrated in figure 2, processes all requests by entities which desire to find a suitable match for their activity and/or criteria. Event registration then adds the event to event repository 102 and the entity which created the event is notified via response handler 110 that the event has been registered. A match request is routed to match engine 112 and match engine 112 performs a search of event repository 102 to locate a match for the event. Upon locating a match, the entity creating the event and the entity matching the event are notified via response handler 110.

Event modification, as further illustrated in figure 3, processes all of the requests to update a created event. The event is located in event repository 102 or match repository 114 and is updated. The entity updating the event is then notified via response handler 110 that the event has been modified. The modified event and any previous events which had matched the event prior to

modification are then routed to match engine 112 to locate new matches. Upon locating any new matches, the respective owners are notified via response handler 110.

Event deletion, as further illustrated in figure 4, processes all requests by entities which desire to delete their event. The entity is notified via response handler 110 that the event has been deleted and any matches to the event before deletion are routed to match engine 112 to locate new matches.

Match engine 112 attempts to find a match for the event from events stored within event repository 102. If a match is located which completely satisfies the event, the respective event is moved to match repository 114. It is possible that even though a match is found, the event may not be completely satisfied. For instance, a bicycle club's event for a tour across America might solicit for 50 companions. In this case, an individual entities event is completely satisfied by a match with the bicycle club's event, but, the bicycle club's event is not satisfied until there are 50 matches. The entities event is moved to match repository 114 upon matching with the bicycle club's event, however, the bicycle club's event is not moved to match repository 114 until there are 50 matches. In order to be a successful match, an event must match on specific event criteria, such as what, where and when, e.g. house painting, San Jose, August 23-27. Additionally, there must be a match of requested event requirements with event repository's 102 event attributes. For example, a first entity wants their house painted and first entities requirement is that to have there house painted it costs no more than \$100 a room. A second entities rate to paint a room, its attribute, is \$80-100. Lastly, there must be a match of requested event attributes with event repository's 102 event requirements.

For example, a first entities house to be painted has 7 rooms, its attribute, and the second entities requirement to paint a house is a minimum of 6 rooms.

As previously described, response handler 110 notifies the entity who created the event of various actions with regard to the event. The response handler 110 sends these responses back through the calendar access protocol 134 to the calendar application 132. Timer module 104 is utilized to schedule the matching searches on a regular interval.

Figure 1b illustrates the information typically associated with an event that is represented as a calendar event. Information concerning the event, such as when, where and what, is input into the electronic calendaring system by the owner of the calendar and are represented by calendar event 124. Additionally, requirements 126 and attributes 128 are input by the owner and are associated with calendar event 124 as attachments. Furthermore, the entities or events which match with calendar event 124, requirements 126 and attributes 128 are supplied by match server 100 and are associated with calendar event 124 as attendees.

Figure 2 illustrates the actions undergone when an event is registered. At step 200, the event is added to event repository 102. Next, a event registered response is then sent to the entity creating the event 202. A search for suitable matches is then performed 204.

Figure 3 illustrates the steps to modify an event. The original event is first deleted 300. An event registration is then performed for the modified event 302.

Figure 4 illustrates the steps to delete an event. Event deletion is started by attempting to locate the event in the event repository 400. If not found, a search is made for the event in the match repository 402, 404. If the event can not be located, an error is indicated 408. Once located, a determination of whether or not there are other events already matched to the event to be deleted is made 410. If there are not any other events, an event deleted response is sent to the entity deleting the event and the event is removed from the appropriate repository 412, 414, 416. If there are other matched events to the one being deleted, they are located in the event repository or the match repository 418, 420, 428, 430. If the matched events are located in the event repository, the matched event is modified to remove the entity deleting their event from the matched event and a search is performed to find new matches for the matched event 422, 424. The process is then repeated until all matched events are located 426. If the match is found in the match repository, the matched event is modified to remove the entity deleting the event from the matched event 432, the matched event is moved from the match repository to the event repository. The process is then repeated until all matched events are located 440. If the matched events are not located, then an error is indicated 442 and a determination of whether or not there are any more matched events 410.

Figure 5 illustrates the steps to searching for matches. A determination is made of whether or not a first event, event 1, is completely satisfied 500. If event 1 is completely satisfied, it is moved from the event repository to the match repository and the search ends 502, 504. If event 1 is not satisfied, the event repository is checked to determine if there are any more events in the repository. If not, the search ends 508. If there are more events, a search is performed to determine if there is a matching event 510. If a match is not found, the flow moves back to checking the repository for

more events 512, 506. If a match is found, event 1 and the matched event, event 2, are updated to reflect the match, e.g. attendees are added, and a match response is sent to the entities informing them a match is found. A determination is made whether or not event 2 is satisfied, and if so, event 2 is moved from the event repository to the match repository. In either case, the flow returns to step 500 where a determination is again made whether or not event 1 is satisfied and the flow continues as described.

The following is an exemplary working of the present invention. An entity creates a calendar event 124 utilizing calendar application 132, such as, bicycle trip; Saturday, August 27, 1999. The entity defines male, age 25-40, average speed 12-17 mph, and any level of difficulty as the Requirements 126 for a suitable match. Attributes 126 of the entity, male, age 31, average speed 15 mph and moderate difficulty, are associated with the calendar event 124. The calendar event is communicated from the calendar store 120 to the match server 100 via calendar application 132 and calendar access protocol 134. Request handler 108 accepts the calendar event and routes it to the event registration handler of the event handlers 106. The event registration handler registers the event and stores it in event repository 102. An acknowledgment is sent, via response handler 110 and calendar application 132, to the entity. The match engine 112 searches the event repository 102 to find a suitable match to the event at specified times indicated by timer module 104. When a match is found for the event, and the event is satisfied, the event is moved from event repository 102 to match repository 114. The event is updated to add the other entity as an attendee of the event and the entities are notified of the match.

Figures 6a-6b and figures 7a-7b illustrate typical screenshots to generate structured entry of activities and/or criteria to be matched. In figure 6a, an exemplary screenshot showing the creation of a calendar event for a tennis match is shown. The entity creating the calendar event enters information, such as, when the event will take place, where the event will take place, and what the event is. In addition to this information, attributes of the entity creating the calendar event, and any requirements for a match are associated with the calendar event as attachments.

A screenshot for entering criteria to locate an entity of similar interest is shown in figure 6b. The entity which wants to find a tennis companion, enters attributes about themselves. In addition, they enter requirements regarding the entity which would be a match. This information is stored as a calendar event, with the attributes and requirements associated as attachments.

Figures 7a and 7b illustrate an exemplary screenshot for the entry of employment information by an employer and potential employee. Figure 7a shows the entry of requirements, e.g. salary, benefits, etc., of the position sought, and attributes, e.g. experience and skills, of the potential employee entered into the calendaring system by a potential employee. Figure 7b shows the entry of requirements, e.g. experience and skills, for the position, and attributes, e.g. salary, benefits, etc., of the position entered into the calendaring system by an employer. The input entered by both is stored as separate calendar events. These events are then provided to the match server, which determines if there is a match between the calendar events, and if so, notifies the entities, i.e. employer and potential employee.

The above enhancements for calendar systems and its described functional elements are implemented in various computing environments. For example, the present invention may be implemented on a conventional IBM PC or equivalent, multi-nodal system (e.g. LAN) or networking system (e.g. Internet, WWW). All programming, GUIs, display panels and dialog box templates, and data related thereto are stored in computer memory, static or dynamic, and may be retrieved by the user in any of: conventional computer storage, display (i.e. CRT) and/or hardcopy (i.e. printed) formats.

### CONCLUSION

A system and method has been shown in the above embodiments for the implementation of a integrated calendar system and matching. While various preferred embodiments have been shown and described, it will be understood that there is no intent to limit the invention by such disclosure, but rather, it is intended to cover all modifications and alternate constructions falling within the spirit and scope of the invention, as defined in the appended claims. For example, the present invention should not be limited by software/program, computing environment, specific computing hardware and specific calendaring format specifications. In addition, the various elements of the present invention may be located on a single computer system or distributed among multiple systems.

CLAIMS

We claim,

1. A system for anonymous matching of entities utilizing an electronic calendaring system, said system comprising:
  - computer storage retaining one or more calendar events for a plurality of entities, said calendar events representing match data, said match data comprising one or more of: when an activity is to occur, where an activity is to occur, what an activity is, minimum matching requirements, or attributes of an activity or an entity;
  - a match server, said match server operatively connected to said computer storage, and wherein said match server matches at least two calendar events to thereby associate two or more entities based upon said matching data.
2. A system for anonymous matching of entities utilizing an electronic calendaring system, as per claim 1, said system further comprising:
  - a notifying element, said notifying element notifying said associated entities upon matching said at least two calendar events.
3. A system for anonymous matching of entities utilizing an electronic calendaring system, as per claim 1, wherein said notifying element notifies said associated entities via adding attendees to said at least two calendar events.

1     4.     A system for anonymous matching of entities utilizing an electronic calendaring system, as  
2     per claim 1, wherein multiple categories of match data are represented by said one or more  
3     calendar events.

1     5.     A system for anonymous matching of entities utilizing an electronic calendaring system, as  
2     per claim 4, wherein said categories comprise at least one of personal matching, job  
3     positions, job qualifications, meetings and activities.

6. A system for anonymous matching of entities utilizing an electronic calendaring system, as per claim 4, wherein said categories comprise any of a commerce activity, service desired, service offered, item for sale, item desired for purchase, request for quote, delivery or pickup of an item or person(s), replenishment of supplies, or the reservation of the use of a facility, place, vehicle or object.

1     7.     A system for anonymous matching of entities utilizing an electronic calendaring system, as  
2     per claim 4, wherein a multiplicity of times for a commerce activity are available at variable  
3     prices or rates and which the most favorable is selected.

1     8.     A system for anonymous matching of entities utilizing an electronic calendaring system, as  
2     per claim 7, wherein a user selects the most favorable.

9. A system for anonymous matching of entities utilizing an electronic calendaring system, as per claim 1, wherein said system may be implemented locally or remotely on one or more computer-based systems, across networks or existing communication mediums.

10. A system for anonymous matching of entities utilizing an electronic calendaring system, as per claim 9, wherein said across networks element comprises any of LANs, WANs, cellular, Internet or Web based networks.

11. A calendaring system providing a generic matching service which utilizes a first calendar event to represent matching data comprising:

a structured calendar event entry interface, said interface requesting entry of information of an activity to be matched, attributes of an entity entering said first calendar event, and requirements for a match;

a computer storage medium retaining said first calendar event and associated calendar, said first calendar event entered in said computer storage medium via said interface;

a match server operatively connected to said computer storage medium, said match server matching said first calendar event to a second calendar event based upon at least one of said information, said attributes, or said requirements, and

wherein, upon matching said first calendar event to said second calendar event, said entity entering said first calendar event is notified of said match.

12. A calendaring system providing a generic matching service which utilizes a first calendar event to represent matching data, as per claim 11, wherein said notification is performed via adding attendees to said first calendar event.

13. A calendaring system providing a generic matching service which utilizes a first calendar event to represent matching data, as per claim 11, wherein multiple categories of match data are capable of being represented by said first calendar event.

14. A calendaring system providing a generic matching service which utilizes a first calendar event to represent matching data, as per claim 13, wherein said categories comprise at least one of personal matching, job positions, job qualifications, meetings and activities.

15. A calendaring system providing a generic matching service which utilizes a first calendar event to represent matching data, as per claim 11, wherein said system may be implemented locally or remotely on one or more computer-based systems, across networks or existing communication mediums.

16. A calendaring system providing a generic matching service which utilizes a first calendar event to represent matching data, as per claim 15, wherein said across networks element comprises any of LANs, WANs, cellular, Internet or Web based networks.

1 17. A method of providing a generic matching service utilizing an electronic calendar system,  
2 said method comprising:  
3 storing one or more calendar events in computer storage;  
4 storing matching data as said calendar events;  
5 providing said calendar events to a match server, and  
6 matching at least two calendar events based upon said matching data to thereby associate two  
7 or more entities via said match server.

18. A method of providing a generic matching service utilizing an electronic calendar system,  
as per claim 17, said method further comprising:  
moving at least one of said at least two calendar events from an event repository to a match  
repository upon matching said at least two calendar events.

19. A method of providing a generic matching service utilizing an electronic calendar system,  
as per claim 17, said method further comprising:  
notifying said associated entities upon said matching via adding attendees to said calendar  
event.

- 1 20. An article of manufacture comprising a computer user medium having computer readable  
2 program code embodied therein which provides a generic matching service utilizing an  
3 electronic calendar system comprising:  
4 computer readable program code for retaining one or more calendar events;  
5 computer readable program code for representing matching data via said calendar events;  
6 computer readable program code for providing said calendar events to a match server, and  
7 computer readable program code for matching at least two calendar events based upon said  
8 matching data to thereby associate two or more entities via said match server.
- 9 21. A computer program product usable with a programmable computer having computer  
readable program code embodied therein providing a generic matching service utilizing an  
electronic calendar system comprising:  
computer readable program code for retaining one or more calendar events;  
computer readable program code for representing matching data via said calendar events;  
computer readable program code which enables providing said calendar events to a match  
server, and  
computer readable program code for matching at least two calendar events based upon said  
matching data to thereby associate two or more entities via said match server.

- 1 22. A system comprising computer readable program code, said program code embodied upon  
2 and divided among multiple computer storage systems, said program code processing data  
3 between the divided portions of said program code over a network for providing a generic  
4 matching service utilizing an electronic calendar system, comprising:  
5 computer readable program code for retaining one or more calendar events;  
6 computer readable program code for representing matching data via said calendar events;  
7 computer readable program code for providing said calendar events to a match server, and  
8 computer readable program code for matching at least two calendar events based upon said  
9 matching data to thereby associate two or more entities via said match server.

ABSTRACT OF THE DISCLOSURE“System and Method for Matching Entities Utilizing an Electronic Calendaring System”

The present invention provides for an integrated matching service and calendaring system.

5 Calendar events are utilized as a bridge between an electronic calendaring system and a matching service. A calendar event represents an activity, e.g., job opening, tennis match, bicycle race, etc., the requirements to match the activity, the entity attributes, and any match results. An entity defines criteria and information for a matching activity which is stored as a calendar event in the electronic calendar system. Portions of the criteria and information are stored as attachments to the calendar event. The calendar events representing a matching activity and associated attachments are provided to a matching server which locates suitable matches for the activity based upon the criteria and information of the activity. If a suitable match is located, the matching server notifies the entities involved by listing the corresponding entities as attendees associated with the calendar event.

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE  
DECLARATION FOR PATENT APPLICATION

INVENTOR(S):

Joann Ruvolo, Reiner Kraft, Stefan B. Edlund, Michael Lawrence Emens, and Dan Alexander Ford

TITLE:

“System and Method for Matching Entities Utilizing an Electronic Calendar System”

DOCKET NO.:

AM9-99-0134

TO THE HONORABLE COMMISSIONER OF PATENTS AND TRADEMARKS:

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled, “System and Method for Matching Entities Utilizing an Electronic Calendar System,” the specification of which is attached hereto.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

004240 "CE93500

I hereby claim foreign priority benefits under Title 35, United States Code, § 119 of any foreign application(s) for patent or inventor's certificate listed below and having also identified below any foreign application for patents or inventor's certificate having a filing date before that of the application on which priority is claimed.

Prior Foreign Applications				
			Priority Claimed:	Y/N
Number	Country	Day/Month/Year Filed		

I hereby claim the benefit under Title 35, United States Code, § 120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, § 112. I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56 which became available between the filing date of the prior application and the National or PCT international filing date of this application.
